Level
Easy
Overview
The backend is built using Flask, hosted on AWS EC2, with DynamoDB for data storage, and AWS SNS for real-time email notifications. This ensures seamless, scalable, and efficient access to learning materials, with minimal administrative delays.
What will you learn
Amazon EC2 – Hosting the Flask application
Amazon DynamoDB – Storing user and book request data
Amazon SNS – Sending email notifications to users and staff
IAM (Identity and Access Management) – Assigning permissions to EC2
GitHub – Hosting source code for deployment
Skills you gain
Learn how to build and deploy a full-stack web application using Flask on EC2
Understand DynamoDB data modeling and integration using boto3
Set up SNS for real-time alerting and notifications
Manage IAM roles and policies for secure AWS service interactions
